Attention: Town of Chester Zoning

This letter serves as written certification from Formetco, the sign manufacturer, that the light intensity of the digital billboard will be preset not to exceed the illumination levels established by local code of 5,000 Nits per square meter during daylight hours and 500 Nits per square meter between sunset and sunrise. Also, the preset intensity level is protected from end user manipulation by password protected software. Brightness is also controlled at the sign via photocell, and can be dimmed and/or shut off at any time by the Formetco service team remotely.

Regards,

Jim Bradford, NE Sales Manager
Formetco, Inc.
