Date: June 23, 2022

Subject: Summerville Way Holds LLC
3996 Summerville Way (NYS Route 94) Speed Study
Town of Chester, Orange County, New York

Project No.: 22005231A

Colliers Engineering & Design CT, P.C. (CED) has conducted a speed evaluation for Summerville Way (NYS Route 94) in the vicinity of the potential site access driveway for the Summerville Way Holdings LLC Project, a proposed two-lot residential subdivision. In order to collect existing traffic volume and speed data along the roadway, CED installed an Automatic Traffic Recorder (ATR) machine in the vicinity of the proposed access driveway. The location of the machine is identified on Figure No. 1 attached. This ATR machine was installed on Friday June 10, 2022 and left in place for approximately five (5) days until Wednesday June 15, 2022.

The ATR machine collected traffic volume, speed, vehicle classification and vehicle gap data along the roadway. This data is enclosed for referenced. Specifically, the speed data was utilized to determine the average and 85th Percentile Speeds (prevailing operating speed and/or design speed) along the roadway in the vicinity of the proposed site access. This information is provided in the attached ATR machine data but also summarized in the table below for convenience of review.

ATR Machine Speed Data Summary

Direction	Average Speed	85 th Percentile Speed
Eastbound	41 MPH	48 MPH
Westbound	41 MPH	48 MPH

It should be noted that Summerville Way (NYS Route 94) has a posted speed limit of 55 MPH in this vicinity, however the speed data indicates that vehicles are actually traveling below the speed limit in the vicinity of the proposed site access. This attributable to the horizontal and vertical alignment of the roadway in this vicinity.

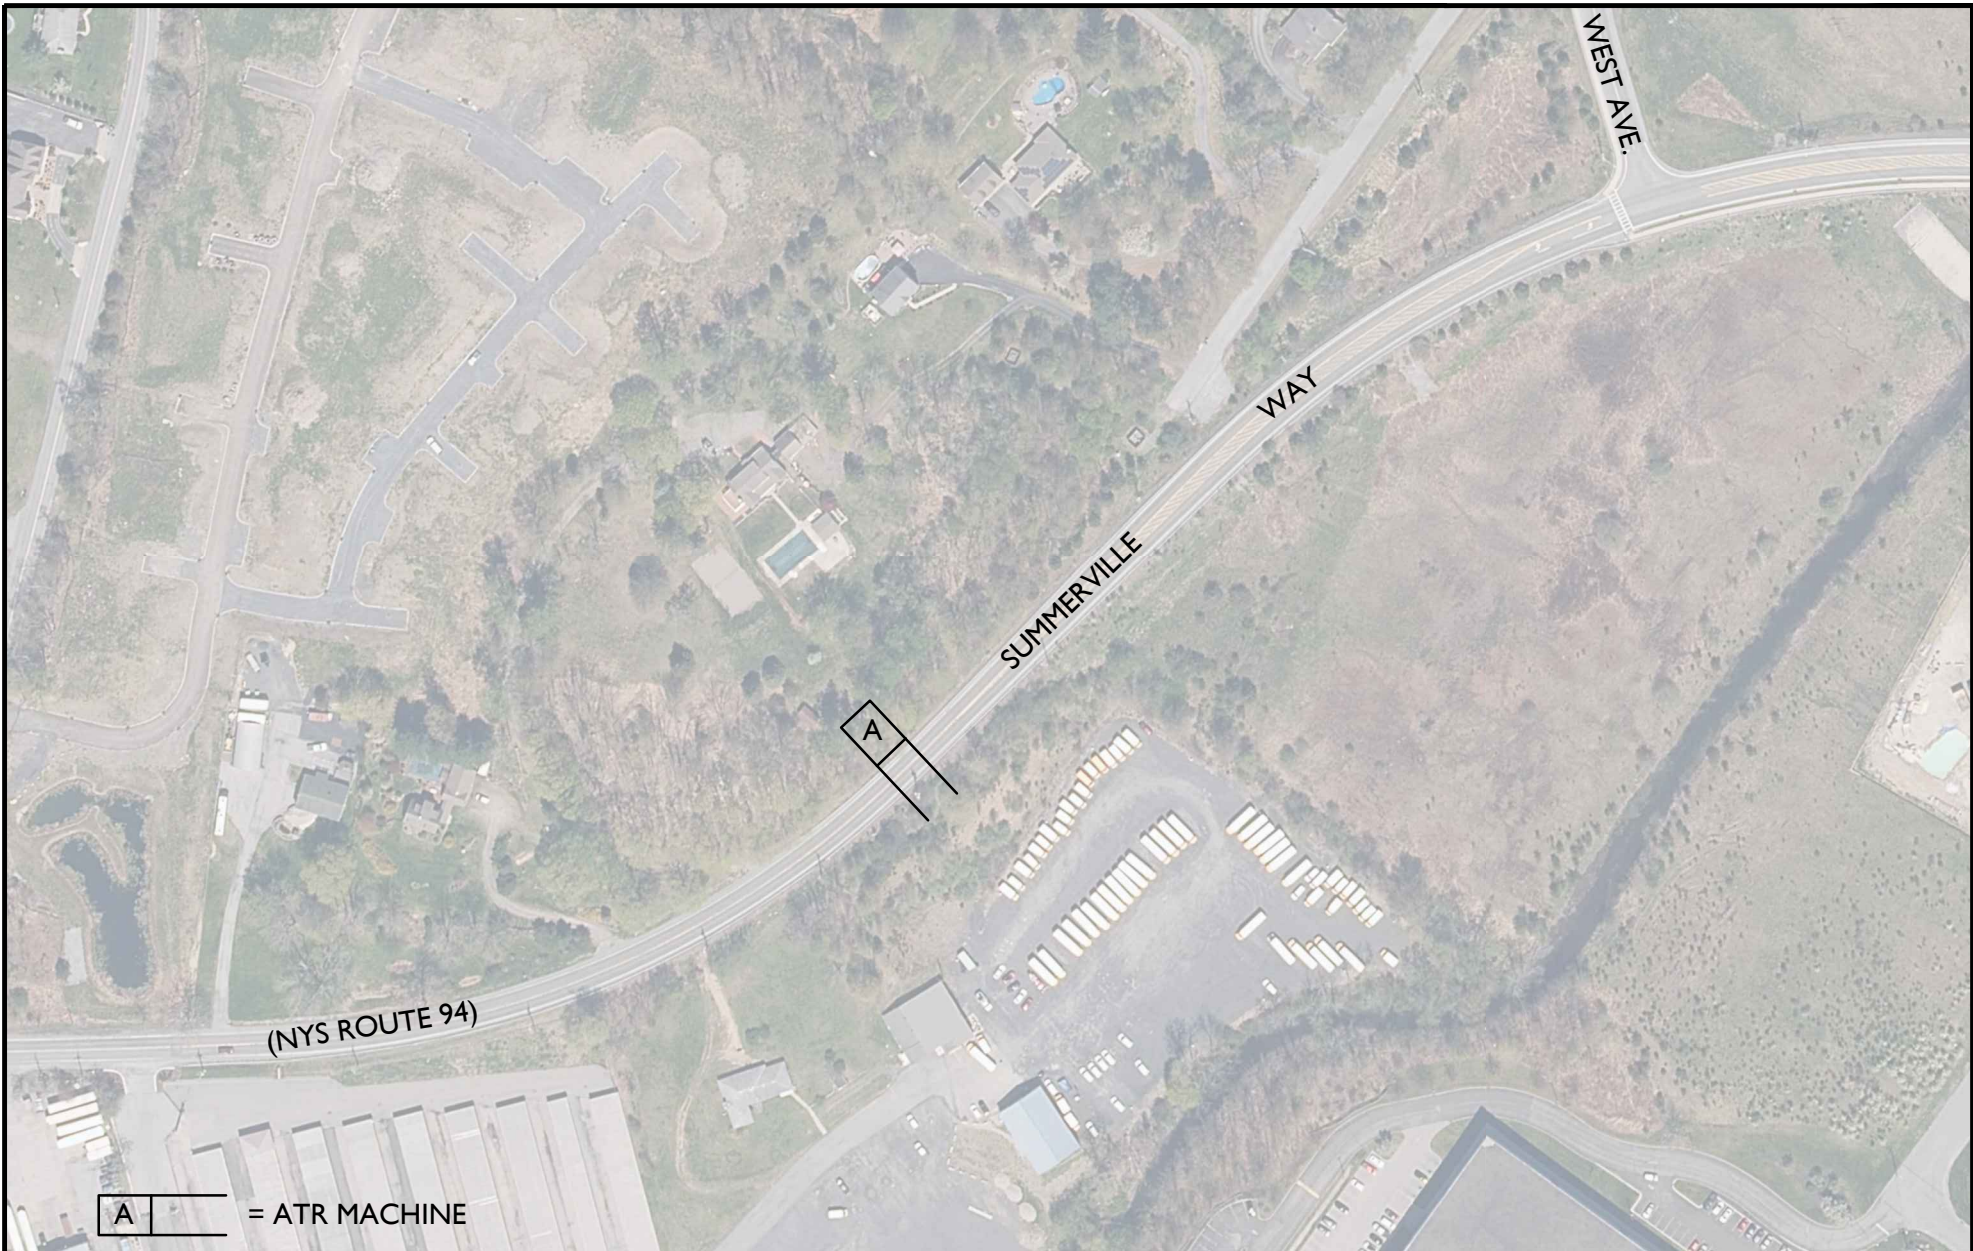

Based on a review of the plans prepared by your office (Sheet No's C-102 and C-103 attached), It appears that a sight distance of 400 ft. can be achieved looking to the right (southwest) from the site access while a sight distance of 500 ft. can be achieved looking to the left (northeast) from the site access. Based on AASHTO, the minimum required stopping sight distance for a 48 MPH design

speed is 400 ft. which is satisfied at this location in both directions. This will allow for the safe operation of the intersection. Note that the approximate grade of Summerville Way in this vicinity is 2.5% for which AASHTO recommends no adjustment to the stopping sight distance based on grade.

Intersection sight distance is also a typical consideration for unsignalized intersections. Intersection sight distance criteria are longer than stopping sight distance to allow the intersection to operate smoothly without forcing major-road vehicles to slow or stop. However, the stopping sight distance is what dictates the safe operation of the intersection. The recommended intersection sight distance for a 48 MPH design speed is 530 ft. Looking to the left approximately 95% of the recommended intersection sight distance will be provided.

It should be noted that for a two (2) lot subdivision such as is proposed, the vehicular movements entering and exiting the driveway will be minimal, likely less than 10 vehicular movements per day. It should also be noted that the gap data attached indicates in excess of 100 gaps of 7.5 seconds or greater during the critical morning and afternoon peak hours. The threshold of 7.5 seconds represents the gap required for a vehicle to comfortably make a left turn onto the roadway from a stop position while not interrupting the flow of traffic in either direction along the main road. Based on the gap data, there are sufficient gaps in the traffic stream to allow for vehicle movements into and out of the driveway.

Based on our review of the existing speeds along Summerville Way (NYS Route 94) as compared to the available sight distances as well as the available gaps along the roadway, it is the opinion of CED that there is sufficient sight distance for the safe operation of the driveway considering the low traffic generation that will be associated with this two-lot subdivision. Furthermore, the posting of intersection ahead signs (MUTCD Sign No. W2-2 or W2-8) could be considered in each direction to warn approaching vehicles of the upcoming driveways in this area.
